

Develop a Django-based web application named **cricketstats** to manage and display data of international cricket players. The application must provide a searchable table of player statistics on the home page, support full CRUD operations (Create, Read, Update, Delete). The app should also have a detail view for each player with average runs calculated dynamically.

Note: Follow below steps strictly, otherwise checking will be affected.

1. **Create Superuser with username as – your roll number & password – 1234.**
 2. **Create .rar file after the end of the project, by closing the server and vs code only. Check if all the files are there in .rar folder after creation.**
 3. **Keep the name of .rar file as enrolment no._name. Do not keep different name, verify your enrolment no. from attendance sheet.**
-

Project Requirements

Project Setup:

- **Project Name: `cricketstats`**
- **App Name: `players`**

Model Design:

Create a model named `Player` in `players/models.py` with the following fields:

Field Name

<code>name</code>	Full name of the player
<code>innings</code>	Total number of innings played
<code>total_runs</code>	Total number of runs scored
<code>highest_score</code>	Highest individual score
<code>team_name</code>	National team the player represents

Pages and Functionalities

Home Page

Displays all players in a table with the following columns:

- Player Name (clickable – opens detail page)
- No. of Innings
- Total Runs

- Highest Score
- Team Name
- Action (Edit | Delete)

Additional Features:

- A search bar filters the table by **Player Name**.
- A button/link "**Add New Player**" opens a form to input player data.

Your Home Page should look like below:

Cricket Player Stats

Search by Player Name

[Add New Player](#)

Player Name	No. of Innings	Total Runs	Highest Score	Team Name	Action
Virat Kohli	292	13848	183	India	Edit Delete
Babar Azam	117	5729	158	Pakistan	Edit Delete
Joe Root	179	7287	133	England	Edit Delete
David Warner	161	6932	179	Australia	Edit Delete
Kane Williamson	161	6554	148	New Zealand	Edit Delete

HTML Snippet for above home page is as below:

```
<!DOCTYPE html>
<html>
<head>
  <title>Cricket Stats</title>
</head>
<body>
  <h1>Cricket Player Stats</h1>
  <form method="get">
    <input type="text" name="q" placeholder="Search by Player Name" value="{{ request.GET.q }}">
```

```

    <button type="submit">Search</button>
</form>
<br/>
<a href="DTL for Add New Player url">Add New Player</a>
<br/><br/>
<table border="1">
  <tr>
    <th>Player Name</th>
    <th>No. of Innings</th>
    <th>Total Runs</th>
    <th>Highest Score</th>
    <th>Team Name</th>
    <th>Action</th>
  </tr>
  DTL for table Data loop
  <tr>
    <td><a href="DTL for Detail Page">{{ player.name }}</a></td>
    <td>{{ player.innings }}</td>
    <td>{{ player.total_runs }}</td>
    <td>{{ player.highest_score }}</td>
    <td>{{ player.team_name }}</td>
    <td>
      <a href="DTL for edit page">Edit</a> |
      <a href="DTL for delete data">Delete</a>
    </td>
  </tr>
  DTL to check Empty loop
  <tr><td colspan="6">No players found.</td></tr>
  DTL to end loop
</table>
</body>
</html>

```

Add Player Page

- A plain HTML form to input new player data.
 - Fields: Name, Innings, Total Runs, Highest Score, Team Name.
 - On submission, data is saved using `request.POST` and redirects to the home page.
-

Edit Player Page

- Displays an HTML form pre-filled with the selected player's data.
- On form submission, the player's details are updated and saved.

Clicking Add New Player and Edit Button should open page shown below, and clicking on add player/ save changes should add/edit data in the database, redirect to home page and changes should reflect on home page.

The image displays two side-by-side browser screenshots. The left screenshot shows the 'Add New Player' page with the following form fields: Name (text input), No. of Innings (text input), Total Runs (text input), Highest Score (text input), and Team Name (text input). Below the fields are an 'Add Player' button and a 'Back to Home' link. The right screenshot shows the 'Edit Player' page for a player named Virat Kohli. The form fields are pre-filled with: Name: Virat Kohli, No. of Innings: 292, Total Runs: 13848, Highest Score: 183, and Team Name: India. Below the fields are a 'Save Changes' button and a 'Back to Home' link.

HTML Snippet for Add Player Page is as below:

```
<!DOCTYPE html>
<html>
<head>
  <title>Add Player</title>
</head>
<body>
  <h1>Add New Player</h1>
  <form method="post">
    {% csrf_token %}
    <label>Name:</label><br>
    <input type="text" name="name"><br><br>
    <label>No. of Innings:</label><br>
    <input type="number" name="innings"><br><br>
    <label>Total Runs:</label><br>
    <input type="number" name="total_runs"><br><br>
    <label>Highest Score:</label><br>
    <input type="number" name="highest_score"><br><br>
    <label>Team Name:</label><br>
    <input type="text" name="team_name"><br><br>
  </form>
  <button type="submit">Add Player</button>
  <a href="/home/">Back to Home</a>

```

```
<button type="submit">Add Player</button>
</form>
<br><a href="DTL for home url">Back to Home</a>
</body>
</html>
```

HTML Snippet for Edit Player Page is as below:

```
<!DOCTYPE html>
<html>
<head>
  <title>Edit Player</title>
</head>
<body>
  <h1>Edit Player</h1>
  <form method="post">
    {% csrf_token %}
    <label>Name:</label><br>
    <input type="text" name="name" value="DTL for name"><br><br>
    <label>No. of Innings:</label><br>
    <input type="number" name="innings" value="DTL for innings"><br><br>
    <label>Total Runs:</label><br>
    <input type="number" name="total_runs" value="DTL for total runs"><br><br>
    <label>Highest Score:</label><br>
    <input type="number" name="highest_score" value="DTL for highest score"><br><br>
    <label>Team Name:</label><br>
    <input type="text" name="team_name" value="DTL for team name"><br><br>
    <button type="submit">Save Changes</button>
  </form>
  <br><a href=" DTL for home url ">Back to Home</a>
</body>
</html>
```

Delete Player

- Deletes the player entry from database and redirects to the home page.
-

Player Detail Page

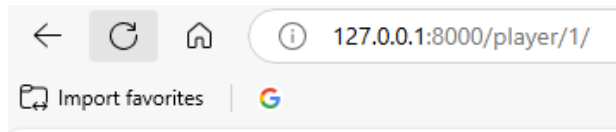

Displays all information about the selected player.

- Player Name (clickable – opens detail page)
- No. of Innings

- Total Runs
- Highest Score
- Team Name
- Calculates and displays the **batting average** as:

$$\text{average} = \text{total_runs} / \text{innings}$$
- Includes a **Back** link to return to the home page.

Your Detail page of first entry in table should look like below:

Player Detail

Name: Virat Kohli

Innings: 292

Total Runs: 13848

Highest Score: 183

Team Name: India

Average: 47.42465753424658

[Back to Home](#)

HTML snippet for player detail page is as below:

```
<!DOCTYPE html>
<html>
<head>
  <title>{{ player.name }} - Details</title>
</head>
<body>
  <h1>Player Detail</h1>
  <p><strong>Name:</strong> DTL</p>
  <p><strong>Innings:</strong> DTL</p>
  <p><strong>Total Runs:</strong> DTL</p>
  <p><strong>Highest Score:</strong> DTL</p>
  <p><strong>Team Name:</strong> DTL</p>
  <p><strong>Average:</strong> DTL</p>
  <a href=" DTL for home url ">Back to Home</a>
</body>
</html>
```

Data Entry Options

-  Admin Panel (`/admin/`) for full CRUD.
 -  HTML Forms using `request.POST`.
-

Sample Data (for initial load)

Name	Innings	Total Runs	Highest Score	Team Name
Virat Kohli	292	13848	183	India
Babar Azam	117	5729	158	Pakistan
Joe Root	179	7287	133	England
David Warner	161	6932	179	Australia
Kane Williamson	161	6554	148	New Zealand

You need to load this data via admin panel or add new player form. (Data has to be entered into the Database and then it should be displayed on html page dynamically, static data will not be allowed)

Technical Constraints

- Use **DTL (Django Template Language)** for rendering templates. (HTML snippets for codes are already provided to you, add DTL at required places to make the project work)
